

Project 3

CIS 1420 – OAKLAND COMMUNITY COLLEGE – OR
DR. JOHN P. BAUGH

Points: _____ / 100

Instructions

You are to build a “My Favorites” Website with **three** pages:

- Home
- Links
- Gallery

There should be a navigation bar on the left side **or** top of each of your Web pages. You should somehow accentuate the current page you are on. This could involve a color difference, weight difference (boldness vs regular), or some other clever, but obvious, difference.

On the **Home** page, you just need to welcome your guests.

On the **Links** page, you should provide links to at least 3 Websites of your choosing that you think are interesting. There should be a short description provided about each Website. Obviously, a link must be present for each of these as well in addition to the description.

On the **Gallery** page, you should place images of something you find interesting. They could be pictures of family, pets, superheroes, books, etc. Use **CSS** so that if you hover over an image, something changes about that image. For example, perhaps a dashed border appears around it, or the color inverts (CSS transitions are allowed!)

Deliverables

You should have the single top-level folder, **P3_Favorites**, with the index.html (homepage) under it as well as the links page (links.html) and the gallery (gallery.html). Additionally, you should have an **images** folder with any images that you use under that. Do not name the folder anything more complex – your name and student information are AUTOMATICALLY affixed to the projects when I download them. You must zip the folder **P3_Favorites** and upload the zip file to the appropriate project directory.

You should also include a comment at the top of your HTML file that has your name, the class name, the semester information, and project information, such as the following:

```
<!--  
    Carrie Oakey  
    CIS 1420  
    Project 3  
    Fall 2022  
-->
```
