

Project 4

CIS 1420 – OAKLAND COMMUNITY COLLEGE – OR
DR. JOHN P. BAUGH

Points: _____ / 100

Instructions

You are to build a custom Website about a **historical figure, historical event, etc.** Your Website must consist of at least **four pages**, including a Home page (index.html).

The requirements are a little more open-ended, but you must have at least the following:

- Four pages including home page
 - Mentioned earlier
- At least two images somewhere on the Website
 - Two images total, as a minimum
 - This doesn't mean each page has to have two images, just as long as the entire Website has at least two images
- You must have at least one **video** or **audio** element in your Website
- You must have at least **one referenced/embedded font**
 - You may use Google fonts (<https://fonts.google.com/>), Adobe Edge Web fonts (<https://edgewebfonts.adobe.com/>), or any other fonts that you download yourself
 - Your font may be referenced from a font CDN (e.g., Google fonts), or downloaded from some Website like FontAwesome or something else.
- You must have at least **one CSS transition, transformation, animation, or filter**
 - Notice: **or** is the keyword. You don't have to have one of each.
 - You can use as many as you want (be tasteful and don't go overboard and make your Website give users seizures)

Ideas for topics (just to kickstart your brain – you don't have to pick one of these specific historical areas or events):

- US Presidents
 - Washington, Jefferson, Adams, Teddy Roosevelt, Eisenhower, Lincoln, Johnson, Carter, Reagan, Bush, Clinton, Obama, Trump, etc.
- Kings and Queens of England and/or Great Britain

- Elizabeth I, Alfred the Great, Harold Harefoot, Harthacnut, Edward the Confessor, William I, Henry V, Edward IV, Mary I (Bloody Mary), Anne
- World War I
- World War II
- War of Roses
- The Wadai Sultanate
- The War of Two Brothers (The Inca Civil War)
- The Taiping Rebellion

Or any of many others!

Deliverables

You should have the single top-level folder, **P4_History**, with the index.html (homepage) under it as well as other pages. Additionally, you should have an **images** folder with any images that you use under that. Do not name the folder anything more complex – your name and student information are AUTOMATICALLY affixed to the projects when I download them. You must zip the folder **P4_History** and upload the zip file to the appropriate project directory.

You should also include a comment at the top of your HTML file that has your name, the class name, the semester information, and project information, such as the following:

```
<!--  
    Chris P. Bacon  
    CIS 1420  
    Project 4  
    Fall 2022  
-->
```
